Generative AI for Teaching and Learning

Rapidly evolving generative AI systems include text-generating AI chat services (e.g., ChatGPT, Gemini, Claude), as well as image-generating, audio, and video AI systems. These machine learning-powered systems are increasingly integrated into our daily communication apps, word-processing software, and technology broadly.

As teachers, UCI faculty now need to consider:

1. How might AI impact students' learning both inside and outside the classroom? [See statements below]
2. Is my AI policy – and the rationale – clear on the syllabus? [**Example**; **Digital Learning Lab guidance**]
3. Do my learning objectives and assessments meet the moment? [**DTEI Resource**]

UC Irvine faculty and staff have expertise when it comes to teaching in the age of AI. Here are some links to current **UCI statements and materials**. Depending on the specific pedagogical context and goals, you will see that the attitudes range from the negative – AI distracts from learning – to the positive: certain AI capabilities like tailored tutoring help. This range does not signal thoughtlessness. It signals a real diversity of teaching and learning contexts. In fact, the informed quality of this diversity can be taught to students.

- **Global Languages & Communication**
- **Office of Academic Integrity**
- **UC Irvine Libraries Generative AI and Information Literacy Research Guide**

At the same time, it is important to prepare students for the types of environments they will engage in after graduation. To that end, we have gathered **Relevant Statements on AI Tools from Professional and Educational Arenas**, which include these example directives:

- **National Institutes of Health** [**linked**]. AI-detection technology is used in grant reviews. Researchers should be aware of the risks of AI and are responsible for verifying information, protecting research participants, storing data appropriately, etc. NIH does not consider applications substantially developed by AI to be original ideas of applicants. Peer reviewers are prohibited from using NLPs, LLMs, and other genAI technology for analyzing for peer review.

- **American Psychological Association** [**linked**; **additional guidance**]. Researchers must disclose and cite any use of AI during the drafting of their manuscripts. AI cannot be named as authors on scholarly publications. Researchers are responsible for verifying information received in AI outputs, providing attribution to the AI tools, and maintaining ethical approaches to using genAI technology.

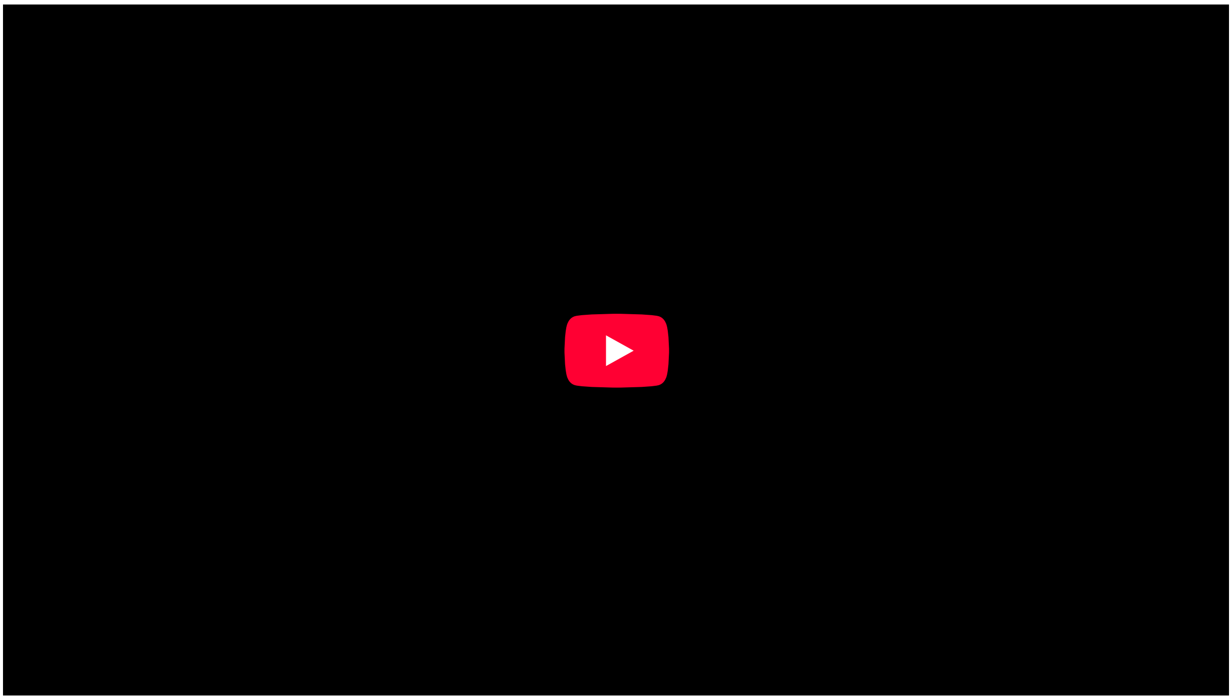
- **Graphic Arts Guild** [**linked**]. The use of AI image generators raises ethical and legal concerns that must be considered, including the unauthorized use of creators' imagery, confusion on copyrights, ethical concerns in the imitation of artists' works, and work displacement for visual artists. The negative impact AI image generating platforms will have on visual artists should be recognized, and measures should be taken by the tech sector to prevent the abuse of creators' works.

- **Corporate and Working World**. Job applicants who have an advanced understanding of AI capabilities and limitations may have an advantage. Job applicants who are dependent on AI capabilities have a disadvantage.

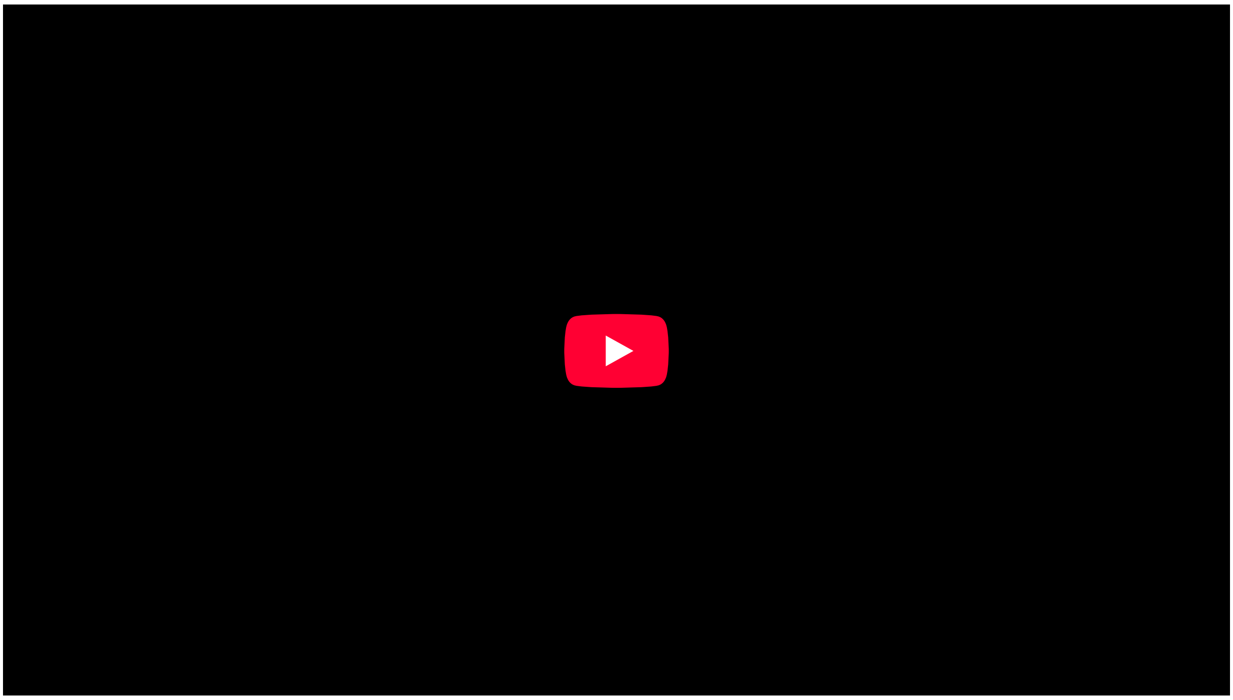
This document is periodically updated. If you have questions, please contact Waverly Tseng (**waverlyt@uci.edu**).

DTEI Events on Generative AI

In Spring 2025, DTEI hosted a speed round-style pitch competition in which several faculty shared their ideas on how AI can be leveraged by faculty and departments to make teaching more efficient and effective. Watch the videos below to learn more about innovative uses of AI to enhance teaching!



On May 21st, 2025, DTEI hosted a panel with School of Humanities where faculty shared their varied approaches to incorporating or moderating AI in humanities courses, including the strategies employed and perspectives on the potential role of AI in students' writing development. Watch the recording below to learn about GenAI in Humanities courses.



OVPTL AI Advisory Committee

The OVPTL AI Advisory Committee was established in Fall 2025 with the mission of providing advice to the Vice Provost for Teaching and Learning and the Associate Dean of the Division of Teaching Excellence and Innovation regarding the intersection of generative AI and instructional practices

Daniel M. Gross

Campus Writing & Communication Coordinator [chair]

Brian Sato

Associate Dean, Division of Teaching Excellence and Innovation

Waverly Tseng

Educational Technology Specialist, Division of Teaching Excellence and Innovation

Sarkis Daglian

Director of AI, Cloud & Client Solutions, Office of Information Technology

Elisa Borowski

Assistant Professor, Samueli School of Engineering

Jonathan Alexander

Chancellor's Professor, School of Humanities

Liz Glynn

Professor, Claire Trevor School of the Arts

Leanne Burke

Clinical Professor, Samueli School of Engineering

Crista Lopes

Chancellor's Professor, Bren School of Information and Computer Sciences

Bob Pelayo

Associate Teaching Professor, School of Physical Sciences

Tingting Nian

Associate Professor, Paul Merage School of Business

Megan Peters

Associate Professor, School of Social Sciences

Tetyana Vasylyeva

Assistant Professor, Joe C. Wen School of Population & Public Health

Adrienne Williams

Assistant Professor of Teaching, Charlie Dunlop School of Biological Sciences

Tom Yeh

Assistant Professor of Teaching, Bren School of Information and Computer Sciences

Segio Gago-Masague

Associate Professor of Teaching, Bren School of Information and Computer Sciences
Council on Educational Policy, UC Irvine Academic Senate

Luyi Gui

Associate Professor, Paul Merage School of Business
Council on Teaching, Learning, and Student Experience, UC Irvine Academic Senate

Jean-Daniel Saphores

Professor, Samueli School of Engineering
Graduate Council, UC Irvine Academic Senate

UC Irvine DTEI

Location

The Division of Teaching Excellence and Innovation is located on the 3rd floor of the Anteater Instruction and Research Building (AIRB).

Address: AIRB 3020, 653 E Peltason Drive, Irvine, CA 92617.
