CNDLS is here to support you as you navigate the uses of generative Artificial Intelligence in your teaching and research. This teaching guide aims to help you navigate these advancements, offering insights into integrating AI into your courses, designing innovative assignments, crafting effective policies, and more.

Learn more about all the other ways CNDLS [engages with AI](#).

How it works	This section introduces the foundational aspects of generative AI, focusing on understanding what it is, how it functions, and its educational opportunities.
AI Tools	Explore how faculty and students can use AI tools effectively across teaching and research tasks.
Designing assignments	Effectively design assignments to integrate AI tools while maintaining educational integrity. Examples included.
Developing course policies	Establish a clear policy on the use of AI tools in your course to foster academic integrity, equity, and creativity.
Selection of AI research	

An overview of the relevant research around AI and education.
