

Artificial Intelligence Teaching Guide

Artificial intelligence technology has become increasingly sophisticated and readily available. We believe that educators can contribute to how this important technology is understood and used. We invite you to engage thoughtfully and attentively with this teaching guide as a way to learn about and positively influence the dialogue around artificial intelligence

in
education.
**For
instructors
and
teaching
teams**

We
offer
this
guide
to
all
instructors
and
teaching
teams
approaching
the
topic
of
generative
AI
tools
in
education,
whether
for
the
first
time
or
as
part
of
your
ongoing
engagement
with
the
topic,
in
response
to
practical
concerns
that
we
heard
from
instructors
like
yourself. You
don't
need
to
be
an
expert
or
have
prior
experience
with
generative
AI
to
use
this
resource,
though
you
should
have
some
understanding
of
or
experience
with
teaching
and
learning
in
higher
education
contexts. We
intend
this
guide
to
apply
to
any
disciplinary

area
or
teaching
modality
and
to
help
you
structure
the
work
of
integrating
AI
tools
into
your
teaching
practice.

Goals and scope of this guide

The
goal
of
this
guide
is
to
help
you
make
informed
and
intentional
decisions
as
you
navigate
AI
technology
in
your
teaching
practice
and
courses.

We
cannot
comprehensively
address
the
complex
topic
of
artificial
intelligence
in
any
short
guide.
Many
campus
service
providers,
such
as
University
Information
Technology
(UIT),
Stanford
Accelerator
for
Learning,
and
the
Institute
for
Human-
Centered
Artificial
Intelligence
(HAI),
have
developed
excellent
resources
that
offer

insight
into

AI
in
terms
of
technical
aspects,
innovative
new
tools,
societal
impacts,
AI
research,
and
so
on.
We
have
chosen
to
focus
on
the
practical
and
pedagogical
aspects
of
AI
tools
in
the
classroom.
We
will
focus
on
generative
AI
chatbots
in
particular,
but
you
may
find
the
content
here
can
also
apply
to
other
generative
AI
tools,
such
as
image,
media,
or
code
generators.

Multiple instructional modules for flexibility

Each
page
of
this
guide
contains
one
instructional
module,
including
content,
practice
tasks,
and
assessment
activities.
We
suggest
that
you
complete
the
activities
and
suggested
readings

in
each

section
as
a
self-
directed
online
lesson.
We
designed
each
module
as
a
discrete
and
complete
lesson
that
you
can
finish
in
a
relatively
short
amount
of
time.
You
can
work
through
the
modules
in
any
order.
We
encourage
you
to
engage
fully
with
each
module,
completing
the
recommended
activities
to
reinforce
your
learning.

Each
module
has
specific
goals
and
objectives:

1. **Understanding
AI
literacy**

—
Examine
a
framework
that
identifies
and
organizes
skills
and
knowledge
useful
for
navigating
generative
AI.

2. **Defining
AI
and
chatbots**

—
Define
common
concepts
and
explain
how
AI
tools
work

3. **Exploring
the
pedagogical**

**uses
of**

**AI
chatbots**

—
Explore
educational
use
cases,
describe
risks,
and
access
and
practice
using
chatbots.

**4. Analyzing
the
implications
for
your
course**

—
Describe
campus
AI
policy
guidance,
evaluate,
and
analyze
your
course

**5. Creating
your
course
policy
on
AI**

—
Draft
a
course
policy
on
AI
use
for
your
syllabus

**6. Integrating
AI
into
assignments**

—
Examine
ways
to
integrate
AI
tools
into
assignments
and
activities
used
to
assess
student
learning

**Complete
the
modules
with
your
colleagues**

Learning
together
with
others
can
deepen
the
learning
experience.
We
encourage
you
to
organize
your
colleagues
to
complete
these
modules
together.

Facilitate an AI workshop based on these modules

Stanford's Center for Teaching and Learning has also developed do-it-yourself workshop kits inspired by these modules. The kits expand upon the topics and strategies covered in these modules. Each workshop kit typically contains a resource list, sample agenda, promotional materials, slide presentation, facilitator's notes, key strategies, and an evaluation tool to assess learning and gather feedback.

- [Exploring Pedagogic Uses of AI Workshop Kit](#)
- [Analyzing the Implications of AI Workshop Kit](#)
- [Creating an AI Course Policy Workshop Kit](#)
- [Integrating AI into Assignments Workshop Kit](#)

Complete the self-paced Canvas resource on critical AI literacy

Stanford's Center for Teaching and Learning has also developed a [Critical AI Literacy for Instructors](#) self-paced, professional development resource available in Canvas. It is designed for instructors new to generative AI (genAI) technology and aims to provide foundational knowledge and skills to critically and effectively navigate genAI in teaching and learning contexts.

How AI was used in the creation of this guide

We did not copy and paste any language generated by AI chatbots into this guide.

We used

AI chatbots, primarily ChatGPT, to generate feedback on the clarity and structure of some of the writing and to clean up some text formatting. We used ChatGPT and other chatbots more extensively in the development of the module "Exploring the pedagogical uses of AI chatbots" to mimic how we thought instructors and students might use them in a course and to better understand the pedagogical potential and challenges of such tools.

Authors and acknowledgments

We are a team of support staff from different parts of the Office of Vice Provost for Undergraduate Education (VPUE). Our team created

the
guide
in
the
summer
of
2023
through
the
collective
effort
of
dedicated
colleagues
from
across
the
university.
We
want
to
thank
the
following
people
who
contributed
to
this
resource.

- Kenji Ikemoto (Center for Teaching and Learning) for leading the project team and being the primary author of this guide.
- Marvin Diogenes (Program for Writing and Rhetoric) for brainstorming, editorial feedback, and sage advice on the meaning of language.
- Sarah Pickett and Kritika Yegnashankaran (CTL) for their pedagogical expertise and teacherly support.
- Carlos Seligo (CTL), Josh Weiss (GSE), and Andy Saltarelli (VPSA) for being thought partners and providing the initial

inspiration
for
this
guide.

- Laura Otero (California State University Monterey Bay) for sharing her exemplary AI in education Canvas course.
- John Mitchell (Computer Science) and Glenn Fajardo (d.school) for leading the Seminar on Generative AI and Education.
- Merve Tekgurler (History) and Patrick Young (Computer Science) for sharing their teaching experience with us.
- Anyone who recommended an article, had a random hallway conversation, or cheered us on.
