- AI Barriers and Safeguards
- Responsible AI at Stanford

MBA/MSx courses: Instructors may not ban student use of AI tools for take-home coursework, including assignments and exams. Instructors may choose whether to allow students to use AI tools for in-class exams. Except for in-class exams, students should be allowed to use AI tools in cases where they are able to use the internet and electronic devices. In-class assignmer prohibited inherently also prohibit use of the internet, AI tools, tablets, laptops, calculators, etc.

Here are some ways you can ask students to acknowledge AI use:

PhD/Undergraduate courses: Follow the [Generative AI Policy Guidance](#) from Stanford’s Office of Community Standards.

- Submit chat logs associated with major assignments or exams
- Disclose AI use according to your industry’s emerging standards, if available
- Include statements with coursework to disclose AI use

Unless otherwise noted, you may copy and redistribute this content.

Example statement: Gemini was used to gather sources for this project and create an initial written draft based on the author’s outline. Substantial revisions were made by the author. Additional fact-checking with ChatGPT. Claude was used to generate data visualizations. The ideas discussed in this report are those of the author alone.

- Reflect on how they used AI for the assignment

Sample prompt: How did you use AI in this assignment? What was or wasn’t effective? What will you do differently next time?

STANFORD BUSINESS

How to Cite AI-Generated Content? Follow Stanford Library’s [guide to citing AI](#) in academic research, including [guidelines](#) and [examples](#). Follow the [Non-discrimination Policy](#), [Privacy Policy](#), [Accessibility](#), and [Terms of Use](#). Follow examples from Stanford UIT on [citing AI-generated content](#). [Contact Us](#) if you provide some examples of how to cite when content is generated by AI?*)
