Empire AI: A National Precedent for Institutional AI Leadership

New York's Empire AI National Precedent

- Empire AI represents a landmark New York State initiative to build a coordinated ecosystem for responsible AI research and development.
- The initiative brings together universities, government, and public-sector resources around shared AI priorities.
- It demonstrates that AI leadership at scale requires institutional collaboration, rather than isolated efforts by individual organizations.
- Empire AI provides a model for connecting advanced research

Empire AI

- \$400M+ initial investment from New York State, universities, and private/philanthropic partners
- Brings together universities, and research institutions
- Builds shared AI infrastructure and research capacity
- Model: Coordinated institutional leadership to advance AI at scale
- Empire AI www.empireai.edu

Why GWU + AI? Why It Matters

- From Washington, D.C. to the world: GW can connect AI innovation, business, government, and policy.
- Washington, D.C. is A positioned to lead the next era of responsible AI.
- Capital Advantage: GWU sits at the intersection of business, government, policy, and technology
- Business Leadership: GWSB can translate AI innovation into business strategy, workforce skills, and organizational value.
- Workforce Reskilling: Prepare students and professionals for emerging AI-driven roles and skills.

Why This Matters Now

1

Empire AI's Precedent

New York's Empire AI proved that AI leadership at scale requires structured consortia — universities, public institutions, and policy actors working toward shared goals.

2

The DC Gap

Washington, D.C. currently lacks a comparable business-centered AI governance and workforce reskilling consortium, despite sitting at the center of federal policy.

3

The Signal

Microsoft's Mustafa Suleyman warns most white-collar tasks could be automated within 12–18 months; JPMorgan's Jamie Dimon stresses AI must be deployed with governance and oversight.

By 2030, nearly 40% of workers' core skills are A to change due to AI, automation, and the shift to new economic sectors. — World Economic Forum

THE MODEL

Capital AI adapts Empire AI's consortium logic, but redirects it from computing infrastructure to human capital infrastructure.

EMPIRE AI

Large-scale compute

Statewide research

Technical capability

Infrastructure

CAPITAL AI @ GWSB

Human-centered AI governance

Business & workforce reskilling

Skills, judgment, policy translation

Institutional adoption frameworks

1. NOVELTY & DISTINCTIVENESS

A Different Kind of AI Initiative

Many AI initiatives focus on technical infrastructure or computing capacity. Capital AI instead focuses on human capital helping organizations, agencies, and professionals understand how to adopt and govern AI responsibly.

Positioned in Washington, D.C. the intersection of industry innovation, academic research, and government workforce needs.

Faculty identify, access, and experiment with the latest AI tools before classroom integration

Partnerships with tech companies, startups, and government secure educational licenses

First Capital-AI-inspired, business-school-led AI consortium in the nation's capital

Who Capital AI Serves

1

Students

Practical exposure to industry tools, business analytics, and AI governance frameworks that prepare them for careers in the private and public sectors.

2

Faculty

New opportunities to explore emerging AI technologies, obtain licenses, and develop case studies and applied research from real organizational challenges.

3

Business & Government

Support for workforce reskilling and professional development as AI reshapes industries and public-sector operations.

Located in D.C., GWSB uniquely connects corporate leaders, federal agencies, policymakers, and academic researchers.

Key Outputs, Built to Be Reused

1

Capital AI Framework for Business & Government Applications

2

Enterprise AI platforms and educational licenses for research and teaching

3

Applied case studies on AI in business, government, and regulatory environments

4

Curriculum modules spanning finance, marketing, analytics, operations, and public-sector decision-making

Dissemination Across the Community

- Faculty workshops on emerging AI tools used in business and government
- AI literacy integrated across business school curricula
- Collaborative research on AI adoption in organizations and public institutions
- Executive education for leaders and government officials
- Seminars and public discussions on AI governance and policy

“GWSB will serve as a platform for sharing knowledge about AI adoption across the private and public sectors.”

Human-Centered

Human Oversight

Technology supports decision-making while preserving human accountability.

Bias & Transparency

Faculty and students explore algorithmic bias, transparency, and regulatory compliance.

Tool Evaluation

Industry outreach helps identify which emerging technologies are most relevant and responsible.

Policy Alignment

Frameworks align with university policy on AI governance, data protection, and privacy.

A Phased, Measurable Rollout

School-Level Execution

Faculty tool access, department-level syllabus integration, and a Responsible AI Policy-in-Practice Playbook within GWSB.

University-Level Expansion

Validated frameworks scale across George Washington University as a shared AI governance and reskilling model.

Government & Policy Alignment

D.C. positioning enables government adoption — a real-world testbed feeding insight back into policy and reskilling.

Business education → Policy insight → Improved governance → Better reskilling

From Public Precedent to Institutional Practice

Empire AI showed what is possible when AI is treated as a public, institutional responsibility. Capital AI @ GWSB applies that same philosophy to business, workforce reskilling, and policy adaptation.

As the oldest business school in the nation's capital, GWSB is positioned to lead starting at the school level, expanding to the university, and informing government adoption.

THE RISE OF AGENTIC AI

From Assistance to Action — and the Governance Gap

AI is moving beyond generating answers.

AI agents can increasingly plan, execute tasks, interact with software, and make decisions with limited human intervention.

This creates new opportunities for business and new questions about authority, oversight, risk, and accountability.

5 QUESTIONS BUSINESS LEADERS MUST ANSWER GW School of Business is positioned to help answer them from the nation's capital.

DEPLOY

Which AI agents should we use?

AUTHORITY

What data, systems, and decisions can they access?

PERFORMANCE

How do we measure accuracy, ROI, reliability, and risk?

HUMAN OVERSIGHT

When must a human approve or intervene?

ACCOUNTABILITY

Who is responsible when AI makes a mistake?

Gartner: governance is a critical barrier to autonomous AI adoption

THE OPPORTUNITY FOR CAPITAL AI @ GWSB: Prepare leaders to USE • LEAD • GOVERN • WORK ALONGSIDE AI AGENTS

CONCLUSION

From AI Adoption to AI Leadership

We may not be able to predict every breakthrough or answer every question AI will raise. But GW can help shape how AI is adopted, governed, and translated into business and public-sector practice.

SHAPE POLICY

Inform responsible AI policy, governance, and adoption

PREPARE PEOPLE

Build AI skills and workforce readiness

SOLVE BUSINESS CHALLENGES

Connect AI innovation to real organizational needs

We do not need to have all the answers to help shape the direction.
